

ForeverFlex™

Forever Flex™ Lining System

We are the leader in chimney relining technology and we are proud to offer Forever Flex™ Chimney Lining Systems, the highest quality chimney liners and lining systems available today, with the exclusive Forever Warranty™. Don't settle for less. Ask for Forever Flex™, the chimney lining system with the Forever Warranty™.

Air & Water Tight

Locks moisture and flue gases in your chimney and keeps them from leaking into your home.

Stainless Steel

Forever Flex™ certified stainless steel liners protect against hostile acids and creosote which break down masonry chimneys and corrode lesser alloys of stainless steel very quickly. These durable lining systems protect the structure of your home from moisture damage and the very real potential of carbon monoxide poisoning. They are UL-listed to handle chimney fires, containing them within the liner, protecting the home from major fires stemming from very severe chimney fires. Forever Flex™ is made from 316 Ti or AL29-4C stainless steel.

- **316 Ti** – a unique alloy designed to resist acids in the flue and the extreme stresses of hot and cold cycles. Can be used with solid fuels (wood, coal and pellet), gas and oil. It can withstand multiple heating cycles up to 2100 degrees.
- **Al 29-4C** – a distinctive alloy intended especially for high-efficient gas and high-efficient oil appliances. The flue gases from these appliances are cooler and create exceptionally high amounts of moisture which in turn promotes formation of an especially corrosive acid

ForeverFlex™

Chimney Lining Systems are **WARRANTEED FOREVER!**

If you sell your home, this warranty is transferable to the new home buyer.

No comparable chimney lining systems have such a warranty!

ForeverFlex™ Chimney Lining Systems has been tested and approved for venting heating appliances by Underwriters Laboratories Inc.

SUPER WRAP™

Foil Face (Super Wrap)

widespread use in Europe, Olympia Chimney Supply is the first lining supplier in the USA to have this material UL listed for use with single wall chimney liner!!!

Our competitors use the ceramic blanket, which is carcinogenic. Olympia has made great strides toward a healthier product that is more pleasant to work with. (46)

The Super Wrap™ Story

This state-of-the-art insulating wrap is designed for use with flex stainless steel liner. But this is no ordinary insulating wrap! SUPER WRAP™ is not the same as ceramic blanket insulating wraps sold elsewhere.

At Olympia Chimney Supply we share your concern about safety and health issues and have considered this when choosing an insulating material for use with the FOREVER FLEX™ system.

You will immediately feel less skin irritation with SUPER WRAP™ and greater strength with the 3-mil aluminum backing foil. You will also breathe easier knowing that SUPER WRAP™ has an accelerated rate of solubility in body fluids. Its low bile persistence makes it a safer alternative to ceramic wool (aluminum silicates) insulating blankets that are in current use.

SUPER WRAP™ material is exempt from any carcinogenic classification in Europe and is therefore exempt from the requirement for labeling for carcinogenicity in Europe. Though in

THIS IS HOW IT IS INSTALLED

Step 1

Super Wrap™ insulation is wrapped around the liner

Step 2

The seam is taped with aluminum foil

Step 3

If there is a danger of the insulation being torn during installation, stainless steel wire mesh sleeve is pulled over the insulation.

Step 4

Stainless steel wire is woven around the wire mesh and tied at both ends to insure the insulation will stay in place for years to come.

EverGuard™ Insulation Mix

In some installations this is the best way to provide an insulation factor. For solid-fuel chimneys not meeting code, 1" of EverGuard® Insulation Mix between the masonry and liner provides for zero clearance between the exterior of the masonry and combustibles.

When insulating oil and gas installations no minimum thickness is required and is a great way to reduce condensate and stabilize draft. Sometimes in those tight-clearance chimneys EverGuard® Insulation Mix is the only insulation possible. (47)

UL Listed and Tested for all EverGuard® Systems!

- Forever Flex™
- Armor Flex™
- Rhino Rigid™

THE BEST MIX FOR THE BEST CHIMNEY LINING SYSTEMS

- Stronger than the competition!
- UL 1777 zero clearance insulating material for use with all EverGuard lining systems
- Single bags, boxed, or in 50-bag pallets
- One bag fills 2.5 cubic feet - 45 POUND BAG!
- Often the most economical choice
- Dries faster than other insulating mixes
